

Globanet Merge1 Extends Enterprise Compliance Archiving to Critical Data Types

What is Globanet Merge1 and How Does It Work?

Globanet Merge1 is a generic ingestion engine. It gathers and consolidates various forms of electronic communication you use into Microsoft Exchange, Office365, Lotus Domino, Enterprise Vault or Enterprise Vault.cloud. In addition to handling multiple message formats, Globanet Merge1 is modular and customizable, and offers extensive filtering capabilities.

Globanet Merge1 Makes Messaging Compliance & Consolidation Easy

Globanet Merge1 was designed to reduce compliance and legal risk by enabling discovery of important communications sent via enterprise messaging systems. Organizations can reduce their costs by consolidating ingestions of multiple data types into one ingestion application. In addition, organizations can increase the return on investment in their archiving and messaging solutions by using Globanet Merge1 to enhance the capabilities of their existing solutions to store and retain disparate data sources that are not natively supported. For example, an organization may be using a financial communication application that produces compliance data in XML format. Globanet Merge1 can convert this XML data to the universally supported message format, MSG files, and store them in the organization's deployed journal environment. The organization chooses what to keep, where to store the data and what data to dispose of during ingestion, by leveraging Merge1's robust filtering engine. For example, they can choose to direct monitored custodians' content to a specific archive for review or not store content that is not business critical. With Globanet Merge1, organizations are back in control of their data.

Support for Multiple Formats Out of the Box

Globanet Merge1 comes with support for various source data formats. Each source is licensed separately, so organizations only pay for what they need. Don't see what your organization needs in the list below? No problem! Globanet Merge1 was designed to be updated with new connectors as needed. Simply contact your Globanet sales representative, and we can build what your organization needs. Simplicity and flexibility are built-in to make your job easier. Today, Globanet Merge1 supports various data sources, such as:

- BlackBerry Messenger, Pin-to-Pin & SMS
- Bloomberg Mail, Chat & IM
- Database Content
- EML
- Facebook
- FaceTime
- FXConnect
- LinkedIn
- Liquidnet
- MarketLook
- Merrill Chat
- Microsoft Lync & OCS
- TextGuard iOS & Android
- Thomson Reuters Eikon
- Salesforce Chatter
- SkyTel
- Twitter
- UBS Chat
- XIP
- Yammer
- YouTube

Globanet Merge1 Makes Your Work Easier

Sometimes running an application to keep an eye on your data manually can be problematic. That is why Globanet Merge1 comes with its own scheduler. Does your organization's compliance department need to review data first thing in the morning? Simply schedule Globanet Merge1 to run at midnight. Do different data sources need to be processed at different times of the day? Globanet Merge1 can do that. Does the source data use different identifiers than your organization's internal corporate email address? Globanet Merge1 allows organizations to translate these identifiers into something that their internal mail systems recognize for ease of review.

Globanet Merge1 is fully compatible with Microsoft Exchange, Microsoft Exchange Online and Lotus Domino mail servers, but if your organization is using something else, don't worry, because Globanet Merge1 can also send data to any SMTP server. Globanet Merge1 creates journal envelopes, which are required by many hosted archiving solutions, allowing many customers to move their archives to the cloud, while still retaining control of their data ingestion. Globanet Merge1 has low system requirements, is multi-threaded and includes flexible controls to allow for granular performance tuning, meeting organizations' specific needs. Storing electronic data is pointless if there is no way to retrieve it. By adding customizable metadata tags to the produced MSG files, Globanet Merge1 allows organizations to pinpoint their data by type within their preferred archiving or mail solution. No one likes having to double-check automated systems; Globanet Merge1 has a built-in notification system that informs organizations via email when a task is complete, how many items were processed and if any errors occurred, so no one needs to follow up on the progress of ingestions manually.

Technical Requirements

Operating System: Windows 2003, 2008, 2008 R2: x32 and x64

Processor: Dual Core 2.2 GHz

Memory: 4 GB

Storage: 500 MB storage for application installation and logs; additional storage may be required to hold source data

Microsoft SQL Server: 2005 and 2008 R2

Other Software: Microsoft .Net Framework 4.0, Microsoft Exchange Server (2003, 2007, 2010), Lotus Domino (Server 7.0.3, 8.0, 8.5), Lotus Notes (8.0, 8.5), Outlook (2003, 2007), Enterprise Vault Server (versions 7.5.5 – 10)

Support

Globanet's industry-leading support team, available via email at support@globanet.com, offers support for Globanet Merge1 during organizations' evaluation and use. The support team is also able to assist organizations with converting their search requirements into specific search criteria or helping resolve queries or problems.

Globanet Merge1 is commonly offered with a support and maintenance package, allowing organizations to access expertise with Globanet Merge1 when they need it.

Pricing

Globanet Merge1 is typically priced per active seat for each source connector.
